Training Opportunities Available

Support Families and Strengthen Early Learning with Peep

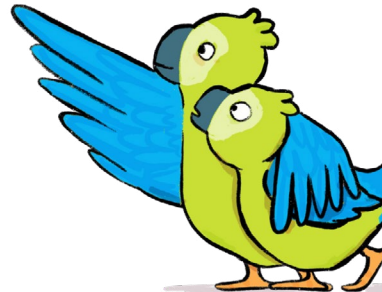

Playgroup Victoria offers professional training in all three Peep programs, developed by UK organisation Peep. These evidence-based programs help professionals support parents to develop sensitive and responsive relationships with their babies and young children, and to improve the home learning environment. Our flexible training model equips you to deliver fun, strengths-based sessions in a wide range of settings - playgroups, early years services, health and community organisations, or 1:1 home support.

Whether you're an educator, family support worker or community practitioner, Peep training gives you practical tools to engage families and make a lasting difference.

The Peep Learning Together Programme helps parents, carers and practitioners support their babies' and young children's development. In Peep groups we share ideas and activities that make the most of everyday learning opportunities, through playing, singing, talking, and sharing books and stories together.

The Peep Antenatal Programme helps parents get to know their baby during pregnancy and beyond, enhancing bonding and attachment. The experiences and relationships during a child's first days, months and years influence the connections that develop between a newborn's 100 billion brain cells.

Peep TALK (Talking and Listening Kit) provides parents with strategies and activities to boost their young children's language and communication during everyday interactions. It can also support families waiting to see a Speech and Language Therapist.
